

MUB

White Fused Mullite

MUB is a fused mullite obtained from fusion of high purity sand and alumina in an electric arc furnaces. It presents low thermal expansion and high thermal shock resistance that make MUB an excellent material for investment casting and other refractory applications.

General Characteristics

True Specific Gravity	Melting Point	Crystalline Structure	Color
3,08 g/cm ³	1.850 °C	Orthorhombic system	White

Chemical Analysis by XRF (%)

Al ₂ O ₃	SiO ₂	Fe ₂ O ₃	Na ₂ O	CaO
74,91	24,19	0,20	0,50	0,07

Typical Physical Properties

Reversible linear thermal expansion 1.400 °C
0,85 %

Grit Size

Size (astm)	Size (mm)
TPF II	- 212 µm
200 MF	- 75 µm
325 MF	- 45 µm

NBR 6946 - jan 2001

* Other grit sizes upon request.
